## WhisperCut circular saw blade

# HIGH PERFORMANCE WITH A WHISPER

**When cutting panels on table and format saws, as well as standing plate saws, the topic of noise reduction becomes increasingly important. Leitz has developed the WhisperCut circular saw blade: user-friendly and future-oriented sawing technology.**

The unique grouping design of the saw blade teeth guarantees excellent cutting quality and virtually universal use for common wood-based panels and solid wood. The saw blade is quiet at idle and low noise in operation, significantly improving the workplace environment.

Thanks to the diamond tips and stable tooth geometry, this saw blade has an extremely long tool life. The ability to be sharpened twice noticeably reduces production costs. Cut for cut, the WhisperCut circular saw blade quietly delivers high performance.

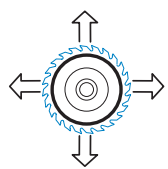

### Materials

- Chipboard and fibre composite materials, plastic and paper coated, veneered
- Engineered wood products, including composites, plywood, MDF and OSB
- Solid wood cross cut
- Honeycomb panels
- Plastic and non-ferrous profiles

### Machine types

- Table and format circular saws
- Vertical panel saws with/without scoring unit
- Crosscut and mitre saws

### UNIVERSAL USE

**Outstanding results and versatility by**

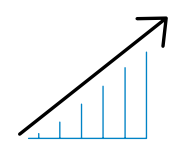

- perfect cutting quality in almost all wood-based panels, solid wood, plastic and non-ferrous profiles
- excellent supporting body stability, even with mitre cuts

### SUPERIOR USABILITY

**Significantly improved workplace ergonomics by**

- sawing in a whisper: extremely quiet at idle and low noise in use
- reduction of cutting forces achieves easy work

### MORE ECONOMIC

**Cut for cut: lower production costs as a result of**

- diamond tips for extremely long tool life
- sharpen twice reducing production costs
- stable tooth geometry for a long service life

For the WhisperCut saw blade, there is no need for a new splitting wedge; use existing scoring saw blades.

## Leitz is your competent partner

Leitz offers partnership, market leading tool knowledge and technology with 3 components for your success:

- Innovative tooling systems, resource saving plus enhanced quality for better production
- Bespoke, modular or comprehensive Tool Management for enhanced efficiency
- Excellent service, reliable, near to customers all around the world
